Introduction

Our Spill the Tea is a platform designed to allow users to browse, review, and rate various stories. It is built using HTML for structure, CSS for design and layout, and JavaScript for functionality and interactivity. The website offers a clean user interface where users can see available stories, search for a specific story, and interact with story details. On the homepage, users are presented with a list of stories that each show a short description. By clicking the "Read More" link, they are redirected to a new page displaying the full synopsis of the selected story. On this page, users can rate the story and leave comments through a simple form, enhancing their engagement with the content.

Key Features:

- **Story Listing**: Displays a variety of stories with short descriptions on the homepage.

- **Search Functionality**: Allows users to search for specific stories by title or keyword.

- **Read More Redirect**: Clicking "Read More" takes users to a new page with the full synopsis.

- **Rating System and Comment Section:** Users can rate each story based on their experience and leave their thoughts and feedback on each story.

- **Responsive Design**: Clean and organized layout designed with CSS for a pleasant user experience.

- **Interactive Elements**: JavaScript is used to handle page and buttons interactions.
